

## **LARGE – LARGER – LARGEST: THIEME 5000 XXL**

*For many years, the printing division states that their customers are printing more and more large sizes – no matter whether the substrates are screen printed, digitally printed or offset printed. THIEME is able to meet these requirements:*

### **Large**

In 2001, THIEME realized the market needs and built the first screen printing line with a max. print size of 1600 x 2600 mm.

### **Larger**

Only three years later, the above format was not big enough! By the construction of the THIEME 5000 XL generation, the print size was increased even more. The THIEME 5000 XL machines are large-size screen printing machines featured with stronger printing tables, a more compact gripper construction, an optimized squeegee unit and an improved operation. The THIEME 5000 XL series ends at a max. print size of 2000 x 3300 mm.

### **Largest**

Last year, THIEME received an order from POSTER PRINT PUBLI, Belgium, on a four-colour line with a max. print size of up to 2600 x 3700 mm. This format enables them to print illuminated roller posters by one single print (before the poster was added together by several prints).

Compared to the THIEME screen printing lines produced so far, the THIEME 5000XXL is featured with the following components:

- The THIEME 5000XXL is featured with a short squeegee and a long squeegee stroke.
- For the first time, the dryer modules of the THIEME 5000XXL are designed as a UV-bridge system.

Further, the technical features and advantages of the THIEME 5000 XL design were taken over.

The THIEME 5000 XXL multi-colour line can print from sheet to sheet as well as from roll to sheet.
